

WHAT IS CLAIMED IS

1. A teaching method comprising:
 - a) assembly of three-dimensional representations of components of multi-component articles familiar to students being taught;
 - b) organization of such components into grade-appropriate groupings of components;
 - c) packaging of the grade-appropriate groupings of components into resealable packages;
 - d) provision of such packages to students; and
 - e) instructions to the students regarding the association of each component to an element of subject matter being taught.
2. The method of teaching according to Claim 1 wherein the components are three dimensional representation of one or more parts of a well advertised hamburger meal.
3. Teaching aids useable to assist students in the organization of written material comprising a resealable package containing multiple three dimensional representations of components of multi component articles familiar to students being taught, the components in the package being selected based on the grade level, or skill, of the student.
4. The teaching aid of claim 3 wherein the components are three dimensional representations of one or more parts of a well advertised hamburger meal.
